

Todo App

MongoDB Application and Project Part

Project: To Do List App using MongoDB, NodeJS, ExpressJS

- Step 1: Set Up Your Environment
- Step 2: Install Dependencies
- Step 3: Set Up Your Application
- Step 4: Create Routes
- Step 5: Set Up Views
- Step 6: Start Your Application
- Step 7: Add MongoDB Connection
- Step 8: Test Your App

On terminal:

1. Run : `npm init -y`(it will give the json file)
2. Then in the json file in the script section add:-

```
"scripts": {  
  "start": "node app.js",  
  "test": "echo \"Error: no test specified\" && exit 1"  
}
```

3. `npm install`
4. Then install the necessary dependencies:-
`npm install express mongoose body-parser`
5. Express:- for setting the server
6. Mongoose:- for setting up the connection with mongo db
7. body-parser:- for parsing the incoming request from application
8. Now everything is done run - `npm start` on terminal
