Todo App

On terminal:

1. **Run : npm init -y(it will give the json file)**
2. **Then in the json file in the script section add:-**

```
"scripts": {
  "start": "node app.js",
  "test": "echo \"Error: no test specified\" && exit 1"
```

3.
4. **Then install the necessary dependencies:-**
   npm install express mongoose body-parser
5. **Express:- for setting the server**
6. **Mongoose:- for setting up the connection with mongo db**
7. **body-parser:- for parsing the incoming request from application**
8. **Now everything is done run - npm start on terminal**
